

Reusable Prompt Library

Requirements review

Analyze the following requirement for ambiguity, omissions, contradictions, and testability. Do not invent missing business rules. Return clarifying questions grouped by risk and suggested test conditions only after each assumption is labeled.

Risk-focused test ideas

Given this feature, users, constraints, and risks, propose high-value test conditions. Include boundaries, negative paths, abuse cases, and expected evidence. Explain which risks each test addresses.

Critique a test case

Review this test case for missing preconditions, unclear steps, inadequate data, ambiguous expected results, assumptions, and gaps in coverage. Do not claim a requirement exists unless it is provided.

Evaluate an AI response

Using only the supplied policy as authority, evaluate this AI response for factuality, groundedness, completeness, privacy, safety, and unsupported claims. Quote the policy evidence for each finding and mark uncertainty.

Review AI-generated code

Compare this code and its tests against the independently stated requirement. Identify shared assumptions, boundary errors, missing negative tests, and ways the tests might pass despite a defect.

Draft an AI test strategy

For the following AI-enabled system, propose a concise risk-based strategy covering scope, top risks, quality attributes, acceptance criteria, test methods, data, monitoring, and ownership. Clearly identify unanswered questions.

Prompting reminder: Review and validate the results. Avoid entering confidential, regulated, or personal information into unapproved AI tools.
